

Trinity Broadcasting Network Delivers Religious Programming to Millions of Viewers in North America via Intelsat's Premier Video Neighborhood

July 22, 2016

Intelsat's Galaxy 14 is the highest penetrated cable distribution satellite in North America

LUXEMBOURG--(BUSINESS WIRE)--Jul. 22, 2016-- Intelsat S.A. (NYSE: I), operator of the world's first Globalized Network, powered by its leading satellite backbone, announced today that Trinity Broadcasting Network (TBN), the world's largest religious broadcasting network and America's most-watched faith-based programming channel, has renewed its contract through the end of Intelsat's Galaxy 14 life to distribute high definition (HD) and standard definition (SD) programming to cable head-ends throughout North America.

Under the multi-year agreement, TBN is leveraging Intelsat's premier video neighborhood, Galaxy 14 at 125° West, to deliver faith-based programming to millions of viewers in North America. Reaching more cable subscribers than any other satellite serving the region, Galaxy 14 distributes more than 200 channels in North America, nearly 100 of which are HD.

"Intelsat's premier video neighborhood provides us access to the highest level of cable penetration, giving us access to millions of viewers in North America and maximizing the audience for our faith-based content," said Bob Fopma, Vice President of Production, Trinity Broadcasting Network. "Galaxy 14's resilience and the redundancy provided by the robust Galaxy fleet support our goals of reliability and efficiency for our North American distribution."

"The eight satellites comprising the North American Galaxy video neighborhoods enable the delivery of more than 1,200 channels, including hundreds of channels in HD. This allows our media customers to maximize audience reach and expand their businesses. By incorporating satellite solutions into their distribution network, Tier 1 Cable programmers such as TBN are able to cost-effectively multicast linear channels and deliver large-scale transmissions that are high quality, reliable and secure," said Mark Rasmussen, Intelsat's Vice President, Americas.
